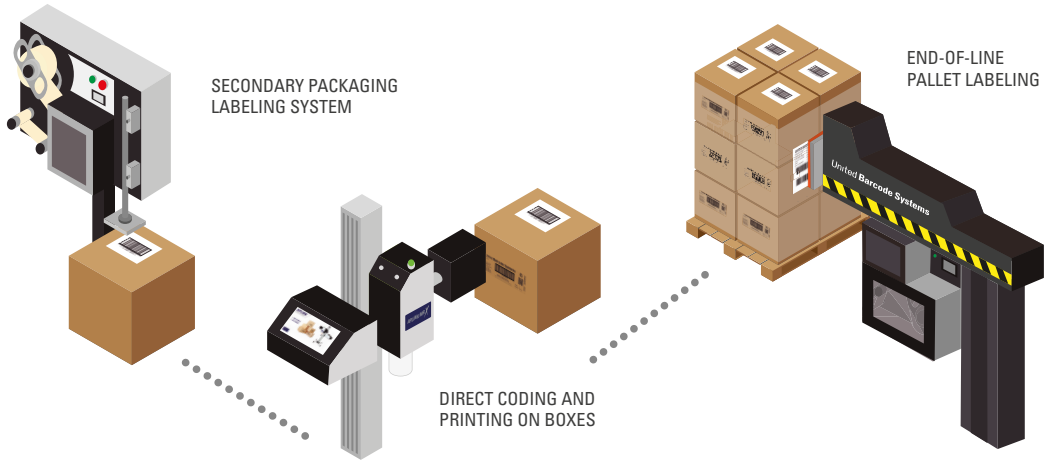
UBS LABMAN



INTEGRATE YOUR DATA WITH YOUR EQUIPMENT

Data management for Print&Apply systems and Inkjet Printers

With Labman we offer the most suitable tool for managing and controlling the labeling, coding and marking system on the production lines, thanks to its friendly user interface, simple and modern and powerful communication management for treating data.

Labman has been carried to the web environment in order to view the production easily on any device (computer, tablet, smartphone,...) and guarantees the full management of each line of the production process in real time, including historical data and statistics.

UBS Labman

Data Management
For Print&Apply systems & Inkjet Printers

GET DATA

Import data from external systems, devices or data sources

RESPONSIVE DESIGN

Support for computers, tablets or smartphones

VIRTUALIZED ENVIRONMENT

Install Labman in a virtual server

BE CONNECTED

Communicating with clients via TCP/IP, UDP, WCF (Windows Communication Foundation) or Web Services

Through Labman, we can identify the different products of the different lines, and manage the printing queues, as well as integrate and centralize these data on the ERP/MES of the customer, in order to create and generate all the labels of each logistic unit and with all the information that must have for its correct storage, transport and traceability, following the recommendations and regulations of the GS1 International.

01 Automate your printing process with different initial events

02 Easy and direct integration with ERP, WMS or MES Systems

03 User-friendly web based interface

CONNECTION TO ALL THE LABELING, CODING AND MARKING SYSTEMS OF UBS
